Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6, 14, and 20-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Aginsky (US Patent 4,204,531). Aginsky discloses a device that is capable of compacting bone material that expands having a first component (22) that has a longitudinal axis (along item 7) and tapers and a second component (10/12) that is movably associated with the first component. Note in Fig. 6, how the second component fits into the groove (23 and 24) of the first component. See also Col. 3, lines 5-15. Further, when these two portions, or at least the second portion is fully extended, it interlocks outwardly (Figs. 6 and 7) within the groove. The second component is also capable of moving outwardly in a radial direction (compare Figs. 2 and 3). This structure would also be capable of urging particles in a radial direction outwardly from the longitudinal axis.

Response to Arguments

Applicant's arguments filed 7/19/2007 have been fully considered but they are not persuasive. With regard to the claim amendments, it is held that the second component also defines a shape that would match the periphery of the implant. In

Art Unit: 3733

Aginsky, the second component (10/12) defines a shape in the cavity as it is used. This shape would match, or at least replicate, the shape required by the outer periphery of an implant.

Conclusion

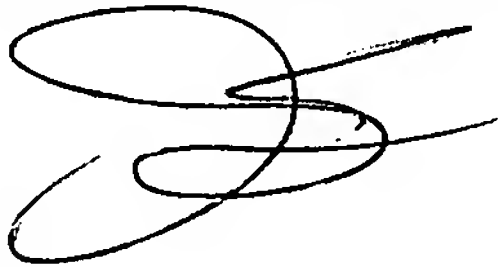

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
